

NORWAY: WELL LOG DATA

Formats Available

Well data from TGS is available in a number of industry standard formats, including digital LAS curves. Only TGS offers Workstation Ready processing, which corrects errors originating from the logging contractor, merges multiple and overlapping runs, performs depth-shifting and standardizes curve mnemonics.

Online Access

Well log data is available via LOG-LINE Plus!®, an online gateway to TGS' collection of well log and other borehole-related data. With time-saving search and data browsing options, it enables users to find precisely the data they need quickly, and download it immediately. LOG-LINE Plus! draws from TGS' quality controlled collection of more than six million instances of well data from key exploration plays worldwide.

Well List Available by Request
